SRINIVAS **VENUVANKA**

Texas United States | 4692474168 | srinivas.venuvanka86@gmail.com | LinkedIn

Summary

Strategic Senior Technologist and Product Owner with over 14 years of experience in enterprise digital transformation, specializing in modernizing content platforms. Drives digital strategies leveraging Generative AI to enhance content velocity and deliver hyper-personalized experiences via Adobe Experience Manager. Integrates AI frameworks and automation to optimize SDLC, improve code quality, and create scalable solutions. Leads implementations of multi-site delivery and AI-enhanced Digital Asset Management, fostering collaboration among cross-functional teams.

Experience

Publicis Sapient **November 2021 to Current**
Senior Associate Technology **Chicago, United States**
Engineered and deployed custom AEM solutions for multiple enterprise clients, integrating third-party platforms and external APIs to enhance multi-region, multi-language support and advanced personalization for authenticated and guest user flows.

- **Navy Federal -** Delivering enterprise-scale Adobe Experience Manager (AEM) Assets as a Cloud Service solutions supporting digital asset management, creative workflows, omnichannel asset delivery, and analytics. Leading migration of enterprise assets from legacy LAN storage to AEM Assets Cloud Service for Marketing. Designing and enabling Adobe Creative Cloud + AEM Assets integration to streamline asset access for designers and creative users. Implementing Dynamic Media with OpenAPI to expose approved assets for consumption across AEM Sites and external channels/applications. Enabling AEM Assets Content Hub for secure distribution and controlled access to enterprise assets by third-party consumers. Integrating Adobe Analytics / Asset Insights to measure asset impressions and consumption across downstream applications. Extending the AEM Assets metadata model with custom metadata and reporting attributes to improve asset governance, discoverability, and reporting.
- **Albertsons Companies** - Directed end-to-end delivery of the Sincerely Health platform, overseeing the architectural modernization to a headless AEM/React stack to drive hyper-personalized user experiences for Health and Pharmacy dashboards. Orchestrated cross-functional collaboration between engineering, design, and product teams to launch core feature sets (Nutrition, Rewards, Health tracking), ensuring consistent delivery of reusable components across the application ecosystem. Spearheaded complex system integrations connecting IoT devices (wearables, glucometer) and external APIs, successfully deploying a custom Goals & Rewards Engine that increased user engagement through gamified health initiatives. Optimized digital operations by automating campaign management workflows through SharePoint and external API integrations, significantly reducing manual overhead and accelerating time-to-market for marketing deliverables.
- **Northern Trust | FlexShares Websites Implementation -** Architected and delivered scalable AEM solutions by translating complex business requirements from product owners into technical stories and design specifications. Engineered high-efficiency data integration pipelines, utilizing custom Sling Jobs to consume third-party REST APIs, process complex financial datasets, and automate DAM content ingestion. Spearheaded global content strategy using AEM Multi-Site Manager (MSM) and advanced tagging architectures to support multi-language and multi-regional site scalability. Developed robust AEM backend components-including OSGi services, Servlets, and Schedulers-leveraging the Sling framework, JCR APIs, and rigorous JUnit testing to ensure performance and maintainability. Streamlined cross-functional delivery by partnering with UX and front-end engineering teams to implement locale-aware, high-performance UI components. Executed technical POCs to evaluate and implement third-party integrations (HubSpot, custom Fund APIs), ensuring seamless system interoperability.
- **NFCU | AEM Platform Migration to AEM as a Cloud Service (AEMaaCS) -** Led the end-to-end cloud migration of Navy Federal Credit Union's (NFCU) AEM platform to AEM as a Cloud Service (AEMaaCS), successfully transitioning on-premise infrastructure while maintaining strict adherence to fixed-bid project timelines. Acted as

a hybrid Technical Lead and Technical Business Analyst, bridging the gap between product requirements and technical execution by managing the product backlog and stakeholder expectations in a high-criticality environment. Architected a robust Identity and Access Management (IAM) strategy using `repoinit` scripting to automate the migration of complex Azure-based users and granular group permissions, ensuring zero regression in security posture post-migration. Established enterprise-grade governance by architecting standardized onboarding workflows and mapping Adobe Cloud Admin Console product profiles, enabling seamless user lifecycle management for internal application teams.

TA Digital dba TechAspect Solutions Inc. now Credera **April 2019 to October 2021**
Principal Engineer **Newark, United States**

WCM Specialist at Vanguard - Led the digital transformation of Vanguard's international marketing ecosystem, modernizing legacy infrastructure and accelerating content delivery through AEM architecture.

- CMS Modernization: Architected migration from legacy TeamSite platforms to Adobe Experience Manager (AEM), defining design phase, migration strategy, and technical roadmap to streamline content management.
- Scalable Engineering: Engineered enterprise-grade solutions including Sling Models, OSGi services, and custom validation frameworks, ensuring highly modular and reusable component development.
- Frontend Integration: Orchestrated the integration of AEM with frontend Angular applications using NX CLI, streamlining the developer experience and ensuring a seamless content-to-code workflow.
- Content-as-a-Service (CaaS): Spearheaded the delivery of headless content models utilizing LSCS runtime services, enabling multi-channel content distribution across the organization.
- Enterprise CMS Governance: Designed and implemented Multi-Site Management (MSM) strategies, including blueprinting, language/live copies, and rollout frameworks to ensure global brand consistency.
- Security & Compliance: Managed AEM security models, including user/group administration and granular ACL permissions, ensuring high-security standards in POC and production environments.
- System Infrastructure: Led the migration of high-traffic applications to modern data centers and cloud platforms, ensuring zero downtime and optimized performance.
- Strategic Alignment: Collaborated directly with business stakeholders and regional teams to gather requirements, prioritize the product backlog, and deliver scalable digital solutions that met specific product data needs.

TechAspect Solutions Pvt Ltd now Credera **February 2012 to March 2019**
Senior Engineer **Hyderabad, India**

Throughout my tenure, I have evolved from hands-on development to strategic technical leadership. I have successfully navigated diverse client engagements by bridging the gap between core engineering, DevOps strategy, and executive stakeholder management. Leveraging a robust technology stack-including AEM, TeamSite, Java, and enterprise search-I deliver scalable digital transformation solutions that balance operational excellence with long-term architectural vision.

- **Waste Management (WM) - AEM Migration -** Led enterprise-wide migration from TeamSite to AEM 6.4, overseeing team activities and strategic execution. Architected reusable components and editable templates leveraging AEM Core Components, reducing development time. Engineered high-performance backend solutions, including custom Sling models, OSGi services, and servlets tailored to run modes. Optimized content delivery performance by architecting dispatcher configurations and managing complex URL redirect mappings. Standardized authoring workflows and provided technical guidance to business stakeholders on content management best practices.
- **Toyota - CMS & Release Management -** Administered Interwoven TeamSite infrastructure, managing installations, upgrades, and large-scale deployments on AWS. Streamlined CI/CD processes by automating build/release scripts with Jenkins and OpenDeploy, reducing deployment overhead. Developed complex Data Capture Templates (DCTs) and integrated database validations to ensure content integrity.
- **Paychex - TeamSite Upgrade -** Managed the end-to-end upgrade of TeamSite from 7.3.2 to 8.1, including requirement analysis and technical design. Collaborated with DBAs and stakeholders to migrate custom

codebases, user databases, and complex UI customizations with minimal downtime. Troubleshot and resolved critical integration issues during the installation and configuration phases.

- **NFL - Infrastructure Optimization -** Spearheaded root-cause analysis and performance tuning to resolve critical server instability and high CPU utilization. Engineered automated maintenance utilities for disk space management, content synchronization, and scheduled backups, ensuring system reliability. Redesigned legacy workflows to improve operational efficiency for the content team.
- **Polycom - Web Support & Maintenance -** Operated within Agile Scrum framework to deliver continuous improvements and bug fixes, maintaining high site availability. Enhanced system functionality by implementing custom workflows and extending foundational components to meet specific business requirements. Managed site structure and global content deployment using AEM Multi-Site Manager (MSM) and Digital Asset Management (DAM). Developed technical runbooks and conducted comprehensive training for content authors to facilitate knowledge transfer.
- **Intermec by Honeywell - Enterprise Search (Elasticsearch) -** Directed the strategic replacement of a legacy Google Search Appliance (GSA) with an open-source Elastic Search solution. Executed technical Proof of Concepts (PoCs) and architectural design to ensure seamless integration with existing frontend applications. Developed configuration for CRON jobs and indexing pipelines, significantly improving site search relevance and speed.
- **Intermec by Honeywell - Website Implementation -** Provided end-to-end support and administration for TeamSite environments, ensuring stable web content delivery. Enhanced authoring capabilities by developing custom templates and UI modifications, improving content team productivity. Conducted regular maintenance on production servers, including log analysis and synchronization, to maintain optimal system health.

Skills

- Adobe Experience Manager
- Content Management
- SAFe 5 Product Owner/Product Manager
- CSM
- Cloud Architecture
- Cloud Solutions
- Java/J2EE
- JavaScript
- React
- HTML
- CSS
- Sightly HTL
- GitHub
- Git CoPilot
- Jenkins
- Eclipse
- VSCode

Certifications

- Adobe Certified Master - Adobe Experience Manager Sites Architect, Adobe
- Certified SAFe 5 Product Owner/Product Manager, SAFe by Scaled Agile, Inc.,

Education

Bachelor of Technology: **Computer Science and Information Technology** **2009**
JNTU India
