SUMMARY

Over 14 years of experience driving enterprise digital transformation at the intersection of Content, Commerce, and Artificial Intelligence. Senior Technologist and Product Owner specializing in modernizing content platforms. I partner with business leaders to shape digital strategies that leverage Generative AI to automate content velocity and deliver hyper-personalized digital experiences via Adobe Experience Manager. Focuses on transforming legacy ecosystems into modern, cloud-first (AEMaaCS) architectures. I integrate Agentic AI frameworks and intelligent automation to enhance agility, speed, and enterprise value delivery. Expert in optimizing the software development lifecycle (SDLC) using AI-assisted coding tools such as GitHub Copilot, Cursor etc., to accelerate delivery, improve code quality, and architect scalable, future-proof technology solutions. Led end-to-end implementations encompassing solution design, multi-site/omnichannel delivery, and AI-enhanced Digital Asset Management (DAM) to unify global digital operations. Drives cross-functional collaboration between design, engineering, and business teams. I oversee AEM governance, migration strategies, and cloud operations, ensuring every initiative balances high-performance innovation with measurable business outcomes. Passionate about nurturing a product mindset that embraces GenAI-driven development—balancing cutting-edge execution with the security and scale required by global enterprises.

EXPERIENCE

Senior Associate Technology

Publicis Sapient **November 2021 - Present, Chicago, IL**

- Engineered and deployed custom AEM solutions for multiple enterprise clients, integrating third-party platforms and external APIs to enable multi-region, multi-language support and advanced personalization across both authenticated and guest user flows.
- **Albertsons Companies -** Directed end-to-end delivery of the Sincerely Health platform, overseeing the architectural modernization to a **headless AEM/React** stack to drive hyper-personalized user experiences for Health and Pharmacy dashboards. Orchestrated cross-functional collaboration between engineering, design, and product teams to launch core feature sets (Nutrition, Rewards, Health tracking), ensuring consistent delivery of reusable components across the application ecosystem. Spearheaded complex system integrations connecting IoT devices (wearables, glucometer) and external APIs, successfully deploying a custom Goals & Rewards Engine that increased user engagement through gamified health initiatives. Optimized digital operations by automating campaign management workflows through SharePoint and external API integrations, significantly reducing manual overhead and accelerating time-to-market for marketing deliverables.
- **Northern Trust | FlexShares Websites Implementation -** Architected and delivered scalable AEM solutions by translating complex business requirements from product owners into technical stories and design specifications. Engineered high-efficiency data integration pipelines, utilizing custom Sling Jobs to consume third-party REST APIs, process complex financial datasets, and automate DAM content ingestion. Spearheaded global content strategy using AEM Multi-Site Manager (MSM) and advanced tagging architectures to support multi-language and multi-regional site scalability. Developed robust AEM backend components—including OSGi services, Servlets, and Schedulers—leveraging the Sling framework, JCR APIs, and rigorous JUnit testing to ensure performance and maintainability. Streamlined cross-functional delivery by partnering with UX and front-end engineering teams to implement locale-aware, high-performance UI components. Executed technical POCs to evaluate and implement third-party integrations (HubSpot, custom Fund APIs), ensuring seamless system interoperability.
- **NFCU | AEM Platform Migration to AEM as a Cloud Service (AEMaaCS) -** Led the end-to-end cloud migration of Navy Federal Credit Union's (NFCU) AEM platform to AEM as a Cloud Service (AEMaaCS), successfully transitioning on-premise infrastructure while maintaining strict adherence to fixed-bid project timelines. Acted as a hybrid Technical Lead and Technical Business Analyst, bridging the gap between product requirements and technical execution by managing the product backlog and stakeholder expectations in a high-criticality environment. Architected a robust Identity and Access Management (IAM) strategy using `repoinit` scripting to automate the migration of complex Azure-based users and granular group permissions, ensuring zero regression in security posture post-migration. Established enterprise-grade governance by architecting standardized onboarding workflows and mapping Adobe Cloud Admin Console product profiles, enabling seamless user lifecycle management for internal application teams.

Principal Engineer

TA Digital dba TechAspect Solutions Inc. now Credera **April 2019 - October 2021, Newark, CA**

- **AEM Specialist at Vanguard** - Led the digital transformation of Vanguard's international marketing ecosystem, modernizing legacy infrastructure and accelerating content delivery through AEM architecture.
- **CMS Modernization:** Architected the migration of legacy TeamSite platforms to Adobe Experience Manager (AEM), defining the design phase, migration strategy, and technical roadmap.
- **Scalable Engineering:** Engineered enterprise-grade solutions including Sling Models, OSGi services, and custom validation frameworks, ensuring highly modular and reusable component development.
- **Frontend Integration:** Orchestrated the integration of AEM with frontend Angular applications using NX CLI, streamlining the developer experience and ensuring a seamless content-to-code workflow.
- **Content-as-a-Service (CaaS):** Spearheaded the delivery of headless content models utilizing LSCS runtime services, enabling multi-channel content distribution across the organization.

- **Enterprise CMS Governance:** Designed and implemented Multi-Site Management (MSM) strategies, including blueprinting, language/live copies, and rollout frameworks to ensure global brand consistency.
- **Security & Compliance:** Managed complex AEM security models, including user/group administration and granular ACL permissions to maintain high-security standards across POC and production environments.
- **System Infrastructure:** Led the migration of high-traffic applications to modern data centers and cloud platforms, ensuring zero downtime and optimized performance.
- **Global Team Leadership:** Led cross-functional, offshore Agile teams, bridging the gap between business requirements and technical execution for critical marketing initiatives.
- **Mentorship:** Acted as a technical mentor for junior engineers and site administrators, providing training on the AEM stack, local environment setup, and adherence to Adobe best practices.
- **Strategic Alignment:** Collaborated directly with business stakeholders and regional teams to gather requirements, prioritize the product backlog, and deliver scalable digital solutions that met specific product data needs.

Senior Engineer

TechAspect Solutions Pvt Ltd now Credera **February 2012 - March 2019, Hyderabad, India**

- Throughout my tenure, I have evolved from hands-on development to strategic technical leadership. I have successfully navigated diverse client engagements by bridging the gap between core engineering, DevOps strategy, and executive stakeholder management. Leveraging a robust technology stack—including AEM, TeamSite, Java, and enterprise search—I deliver scalable digital transformation solutions that balance operational excellence with long-term architectural vision.
- **Waste Management (WM) – AEM Migration** - Led the enterprise-wide migration from TeamSite to AEM 6.4, overseeing team activities and strategic execution. Architected reusable components and editable templates leveraging AEM Core Components, significantly reducing development time. Engineered high-performance backend solutions, including custom Sling models, OSGi services, and servlets tailored to run modes. Optimized content delivery performance by architecting dispatcher configurations and managing complex URL redirect mappings.Standardized authoring workflows and provided technical guidance to business stakeholders on content management best practices.
- **Polycom – Web Support & Maintenance** - Operated within an Agile Scrum framework to deliver continuous improvements and bug fixes, maintaining high site availability. Enhanced system functionality by implementing custom workflows and extending foundational components to meet specific business requirements. Managed site structure and global content deployment using AEM Multi-Site Manager (MSM) and Digital Asset Management (DAM). Facilitated knowledge transfer through the development of technical runbooks and comprehensive training for content authors.
- **Toyota – CMS & Release Management -** Administered Interwoven TeamSite infrastructure, managing installations, upgrades, and large-scale deployments on AWS. Streamlined CI/CD processes by automating build/release scripts with Jenkins and OpenDeploy, reducing deployment overhead. Developed complex Data Capture Templates (DCTs) and integrated database validations to ensure content integrity.
- **NFL – Infrastructure Optimization -** Spearheaded root-cause analysis and performance tuning to resolve critical server instability and high CPU utilization. Engineered automated maintenance utilities for disk space management, content synchronization, and scheduled backups, ensuring system reliability. Redesigned legacy workflows to improve operational efficiency for the content team.
- **Paychex – TeamSite Upgrade -** Managed the end-to-end upgrade of TeamSite from 7.3.2 to 8.1, including requirement analysis and technical design. Collaborated with DBAs and stakeholders to migrate custom codebases, user databases, and complex UI customizations with minimal downtime. Troubleshot and resolved critical integration issues during the installation and configuration phases.
- **Intermec by Honeywell – Enterprise Search (Elastic Search) -** Directed the strategic replacement of a legacy Google Search Appliance (GSA) with an open-source Elastic Search solution.Executed technical Proof of Concepts (PoCs) and architectural design to ensure seamless integration with existing frontend applications. Developed configuration for CRON jobs and indexing pipelines, significantly improving site search relevance and speed.
- **Intermec by Honeywell – Website Implementation -** Provided end-to-end support and administration for TeamSite environments, ensuring stable delivery of web content. Enhanced authoring capabilities by developing custom templates and UI modifications, improving overall content team productivity. Conducted regular maintenance on production servers, including log analysis and synchronization, to ensure optimal system health.

EDUCATION

Bachelor of Technology - Computer Science and Information Technology

JNTU • India • 2009

CERTIFICATIONS

Adobe Certified Master - Adobe Experience Manager Sites Architect

Adobe • 2025

Certified SAFe® 5 Product Owner/Product Manager

SAFe by Scaled Agile, Inc. • 2023

SKILLS

AI Tools : Git CoPilot, Cursor, PS Slingshot, GenAI
Agile : SAFe® 5 Product Owner/Product Manager, CSM
CMS Tools : Adobe Experience Manager, OpenText TeamSite
Cloud Technologies : AWS, Adobe, Azure
Java Technologies : Java/J2EE
Web Technologies : HTML, CSS, JavaScript, Sightly HTL, React
CI/CD Tool : GitHub, Jenkins, Bamboo
IDEs : IntelliJ, Eclipse, VSCode
